

Stylish Public Litter & Recycling Receptacles

We offer one of Australia's most diverse ranges of Litter & Recycling Receptacles manufactured for indoor and outdoor public use.

Our receptacles are made in Australia and have been designed to house a variety of litter or recycling bins.

The customisation and modification of our standard range opens an array of opportunities for creative clients. Colour options, laser cutting and hole perforating are the most popular and effective methods of customisation and some of the results have been spectacular over the years.

Please browse our range of standard designs online and contact us if you'd like to find out more.

Above are some featured examples of both our standard and customised Litter & Recycling Receptacles. The entire range of standard designs are available online.
